this two volume set lncs 8285 and 8286 constitutes the proceedings of the 13th international conference on algorithms and architectures for parallel processing ica3pp 2013 held in vietri sul mare italy in december 2013 the first volume contains 10 distinguished and 31 regular papers selected from 90 submissions and covering topics such as big data multi core programming and software tools distributed scheduling and load balancing high performance scientific computing parallel algorithms parallel architectures scalable and distributed databases dependability in distributed and parallel systems wireless and mobile computing the second volume consists of four sections including 35 papers from one symposium and three workshops held in conjunction with ica3pp 2013 main conference these are 13 papers from the 2013 international symposium on advances of distributed and parallel computing adpc 2013 5 papers of the international workshop on big data computing bdc 2013 10 papers of the international workshop on trusted information in big data tibida 2013 as well as 7 papers belonging to workshop on cloud assisted smart cyber physical systems c smart cps 2013

this volume provides a snapshot of the current and future trends in turbulence research across a range of disciplines it provides an overview of the key challenges that face scientific and engineering communities in the context of huge databases of turbulence information currently being generated yet poorly mined these challenges include coherent structures and their control wall turbulence and control multi scale turbulence the impact of turbulence on energy generation and turbulence data manipulation strategies the motivation for this volume is to assist the reader to make physical sense of these data deluges so as to inform both the research community as well as to advance practical outcomes from what is learned outcomes presented in this collection provide industry with information that impacts their activities such as minimizing impact of wind farms

opportunities for understanding large scale wind events and large eddy simulation of the hydrodynamics of bays and lakes thereby increasing energy efficiencies and minimizing emissions and noise from jet engines elucidates established contemporary and novel aspects of fluid turbulence a ubiquitous yet poorly understood phenomena explores computer simulation of turbulence in the context of the emerging unprecedented profusion of experimental data which will need to be stewarded and archived examines a compendium of problems and issues that investigators can use to help formulate new promising research ideas makes the case for why funding agencies and scientists around the world need to lead a global effort to establish and steward large stores of turbulence data rather than leaving them to individual researchers
