today we know much about the sky how stars are born how they live and die and how the universe as a whole evolves we have learned of the existence of another type of matter indifferent to light and yet decisive for the formation of galaxies and we have a hint of a dark energy that since the last 4.5 billion years has taken over the control of the cosmos we postulated and then discovered and even photographed black holes and listened to the faint rustle of the space time ripple produced when these monsters devour each other we reached these astonishing results recognized by a bunch of nobel prizes and filling every day the media with wonders for the eyes and the mind by the marriage of physics and astronomy that unified the earth with the sky and then by the leap forward of science and technology in the twentieth century this rich heritage has ancient roots it was built by accumulating discoveries with errors observations with fantasies myths and superstitions with flashes of genius over a span of millennia since homo sapiens turning his eyes to the immutable and perfect sky began to ask questions the book is a narration of the answers to these questions that had evolved over time a progressive path inserted in the general history with some second thoughts and many obstacles this is a saga of men and machines where greatness sometimes mixes with misery and passion often borders on sacrifice and even martyrdom why should we know it because our current knowledge is the result of these efforts and of the preconceptions that accompanied them the challenge has been to present this complex and intricate subject without resorting to any formulas so that it can be accessible to a wide audience of curious people including high school and university students and in general all those who normally keep themselves informed of scientific things a rich bibliography has also been added in the appendix for those wishing to learn more on one or more topics

in the history of space exploration there have been many leaps for humankind from the foremost experts at the smithsonian s national air and space museum here is a complete visual narrative of our journey from earth to the stars although the momentous october 4 1957 launch of sputnik 1 was not the beginning of humanity s adventure toward space our curiosity about the skies has been one of the few constants in history it was the first true venture into orbit and when future generations think of the twentieth century they will undoubtedly judge our movement into space with both machines and people as a crowning achievement as we progress in the new millennium space exploration is vital to managing our global future as well as to understanding our past and the creation of earth the atlas of space exploration depicts the ever fascinating history of the space age and humanity s progress in exploring new frontiers incredible images from nasa and other sources visual conceptions of moon bases

and newly commissioned maps reveal a visual history spanning the earliest eras of the universe the dawn of the space age the launch of sputnik missions to the moon robot landings on the terrestrial planets and the exploration of the outer solar system these developments in technology are illuminated by a rich historical context highlighting how space exploration has changed and expanded our vision of the universe

the book presents a unique overview of activities in human spaceflight and exploration and a discussion of future development possibilities it provides an introduction for the general public interested in space and would also be suitable for students at university the book includes the basics of the space environment and the effects of space travel on the human body it leads through the challenges of designing life support systems for spacecraft as wells as space suits to protect astronauts during extravehicular activities research being carried out by humans in earth orbit is being brought into context to other forms of space exploration between the end of 2007 and may 2009 esa the european space agency carried out an astronaut recruitment process it was the first time that astronauts had been recruited newly to the corps since its creation in 1998 and the positions were open to citizens of all of the member states of esa two of the contributors to this book participated in the selection process and hence contribute to a general discussion of how one carries out such a selection programme the book concludes with one person s experience of flying aboard the space shuttle on a mission to map planet earth bringing together topics taken up in earlier parts of the book

the pioneers of astronomy and space exploration have advanced humankind s understanding of the universe these individuals include earthbound theorists such as aristotle ptolemy and galileo as well as those who put their lives on the line travelling into the great unknown readers chronicle the lives of individuals positioned at the vanguard of astronomical discovery laying the groundwork for space exploration past present and yet to come

thisbook provides a rich historical approach to introductoryastronomy it is ideal for use in an introductory astronomycourse for nonmajors based on the very popular liberal arts course bob bless has taught at university of wisconsin for many years this book provides a rich historical approach to introductory astronomy it is ideal for use in an introductory astronomy course for nonmajors in the fifteen years since the first edition of this text was published several new concepts such as dark matter dark energy and an incredible expansion of the universe inflation have been developed furthermore many of the exotic effects predicted by general relativity e g black holes warped space have gone from being interesting theoretical speculations to useful practical tools for understanding the universe this book aims to give an overview of astronomy but in such a way that the non science major can get a feeling for how science actually developed with its false starts and wrong turns which observational evidence

eventually corrected and also to describe the incredible recent developments in our understanding of the physical universe several chapters of this 2nd edition have been extensively revised to include these recent developments because it has become increasingly difficult to cover all of astronomy in a one semester course this edition has largely omitted coverage of the physical nature of the objects in our and other planetary systems although a discussion of the possibility of life elsewhere closes the book
