Before tackling practice questions, it's essential to grasp the core principles. Financial accounting focuses on recording, summarizing, and reporting a company's financial transactions. This involves adhering to generally accepted accounting principles (GAAP) in the US or International Financial Reporting Standards (IFRS) internationally. Key theoretical concepts include:

- The Accounting Equation:** The foundation of double-entry bookkeeping, this equation ( $Assets = Liabilities + Equity$ ) ensures that every transaction affects at least two accounts, maintaining the balance.
- Accrual Accounting:** Recording revenues when earned and expenses when incurred, regardless of when cash changes hands, provides a more accurate reflection of financial performance than cash accounting.
- Matching Principle:** This principle links revenues with their related expenses within the same accounting period, giving a truer picture of profitability.
- Materiality:** Only transactions that significantly impact the financial statements need to be disclosed. Immaterial items can be aggregated or ignored.
- Conservatism:** In cases of uncertainty, accountants should choose the accounting treatment that presents the least optimistic view, erring on the side of caution.
