economists have long viewed recessions as contributing to increasing inequality however this conclusion is largely based on data from a period in which inequality was increasing over time this paper examines the connection between long run trends and cyclical variation in earnings inequality we develop a model in which cyclical and trend inequality are related and find that in our model recessions tend to amplify long run trends i e they involve more rapidly increasing inequality more when long run

inequality is increasing and more rapidly decreasing inequality when long run inequality is decreasing in support of this prediction we present evidence that during the first half of the 20th century when earnings inequality was generally declining earnings disparities indeed appeared to fall more rapidly in downturns at least among workers at the top of the earnings distribution

a holistic approach to the financial problems of the elderly focuses simultaneously on their expenditures that are self financed as well as those that are financed by transfers from the young under age 65 it also focuses simultaneously on paying for health care and paying for other goods and services the income and health care expenditures not paid from personal income provides a useful framework for empirical application of the holistic approach in 1997 approximately 35 percent of the elderly's full income was devoted to health care 65 percent to other goods and services approximately 56 percent of full income was provided by transfers from the young and 44 percent by the elderly themselves the paper shows how these percentages might change under alternative assumptions about the growth of health care relative to other goods and services and the effect of these changes on the need for more saving and more work prior to retirement

this paper estimates reduced form retirement and wealth equations and analyzes the relationship between them data are from the first four waves of the longitudinal health and retirement study individuals born from 1931 to 1941 single equation retirement models relate the probability of retiring to forward looking measures of changes in the values of social security and pension benefits when retirement is postponed such simple models suggest that if the social security early retirement age were to be raised or abolished more people would retire earlier rather than later our work analyzes the reasons for such counter intuitive predictions and discusses the need to analyze these policies in the context of a structural model of retirement and wealth to improve retirement analysis we develop the premium value a measure of the future value of pensions and social security that better reflects the accrual of benefits under defined contribution plans we also introduce a new definition of retirement to blend information on objective hours worked with subjective self reports of retirement status our findings also explore the effects of social security incentives on partial retirement and consider the importance of partial retirement in any study relating social security to retirement behavior

there is a growing literature on the differential impact of soft vs hard information on organizational structure and behavior this study is an attempt to empirically quantify the value of soft information using a data base on the market for screenplays script quality is difficult to estimate without subjective evaluation therefore soft information should be an integral part of the pricing of these intellectual assets in our empirical analysis we find that hard information reputation variables as well as soft information proxies are priced screenplays with high soft information content are priced significantly lower than high concept harder information type scripts we also follow the screenplays to production and find that buyers seem to be able to forecast the success of a script paying more for screenplays resulting in more successful films in other words high concept harder information screenplays sell for more and result in more successful movies national bureau of economic research web site
