historian philosopher critic playwright journalist and actor Egon Friedell was a key figure in the extraordinary flowering of Viennese culture between the two world wars. His masterpiece, *A Cultural History of the Modern Age*, demonstrates the intellectual universality that Friedell saw as guarantor of the continuity and regeneration of European civilization. Following a brilliant opening essay on cultural history and why it should be studied, the first volume begins with an analysis of the transformation of the medieval mind as it evolved from the Black Death to the Thirty Years War. The emphasis is on the spiritual and cultural vortex of civilization, but Friedell never forgets the European roots in pestilence, death, and superstition that animate a contrary drive toward reason, refinement, intellectual curiosity, and scientific knowledge. While these values reached their apogee during the Renaissance, Friedell shows that each cultural victory is precarious and Europe was always in danger of slipping back into barbarism. Friedell's historical vision embraces the whole of Western culture and its development; it is a consistent probing for the divine in the world's course and is therefore theology; it is research into the basic forces of the human soul and is therefore psychology; it is the most illuminating presentation of the forms of state and society and therefore is politics; the most varied collection of all art creations and is therefore aesthetics. Thomas Mann regarded Friedell as one of the great stylists in the German language. Like the works of the great novelist, *A Cultural History of the Modern Age* offers a dramatic history of the last six centuries, showing the driving forces of each age. The new introduction provides a fascinating biographical sketch of Friedell and his cultural milieu and analyzes his place in intellectual history.

*A Cultural History of Objects in the Age of Industry* covers the period 1760 to 1900, a time of dramatic change in the material world as objects shifted from the handmade to the machine-made. The revolution in making and in consuming the things which were made impacted on lives at every scale: from body to home to workplace to city to nation. Beyond the explosion in technology, scientific knowledge, manufacturing, trade, and museums, changes in class structure, politics, ideology, and morality all acted to transform the world of objects. The 6-volume set of *The Cultural History* examines how objects have been created, used, interpreted, and set loose in the world over the last 2500 years. Over this time, the West has developed particular attitudes to the material world at the center of which is the idea of the object. The themes covered in each volume are: objecthood, technology, economic objects, everyday objects, art, architecture, bodily objects, object worlds. Carolyn White is professor at the University of
