issues relating to values have always had a place in the school science curriculum sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with sts emphases of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum one obvious very broad difference of this form is the central place in science education thinking in many european countries of bildung and the complete absence of this construct from most science curriculum thinking in english speaking contexts there are numbers of such country cultural differences in the 1990s many countries moved towards various conceptualizations of outcomes based education obe sometimes so labelled and sometimes not it was usual but not universal for obe focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic currently there are a number of education systems that are changing again and choosing to move away from outcomes based education for example south africa and several australian states one of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum

including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education
