Julian Agyeman once again pushes us all to think more critically about how to integrate two important political and intellectual projects

Scientists have long sought to unravel the fundamental mysteries of the land, life, water, and air that surround us, but as the consequences of humanity's impact on the planet become increasingly evident, governments are realizing the critical importance of understanding these environmental systems and investing billions of dollars in research to do so. To identify high-priority environmental science projects, *Grand Challenges in Environmental Sciences* explores the most important areas of research for the next generation. The book's goal is not to list the world's biggest environmental problems; rather, it is to determine areas of opportunity that, with a concerted investment, could yield significant new findings. Nominations for environmental science's grand challenges were solicited from thousands of scientists worldwide. Based on their responses, eight major areas of focus were identified: areas that offer the potential for a major scientific breakthrough of practical importance to humankind and that are feasible if given major new funding. The book further pinpoints four areas for immediate action and investment.

discusses changing attitudes of man towards his environment, advocating more effective stewardship of the earth's resources through individual, corporate, and governmental action.

First published in 1999, this volume features contributors specializing in urban planning and examines the challenges of environmental planning in urban areas, focusing on policy, management, organization, and policy. A collection of ground-breaking and thought-provoking papers, they are written by some of the most distinguished internationally known names in the field of urban sustainability. The authors go beyond debates about approach and policy options to look at what is taking place. The experience of urban environmental management is presented from several countries: in Africa, Latin America, Europe, and Asia, they examine

over twenty case studies in contributing to existing knowledge of environmental management practice in urban areas emphasising the issue in both northern and southern countries in relation to growing awareness in the north and rapid city growth in the south while containing critical analyses the emphasis is placed on achievements and promising developments of vital importance to local administrators policy makers town planners academics environmentalists and students alike
