a truly galilean class volume this book introduces a new method in theory formation completing the tools of epistemology it covers a broad spectrum of theoretical and mathematical physics by researchers from over 20 nations from four continents like vigier himself the vigier symposia are noted for addressing avant garde cutting edge topics in

contemporary physics among the six proceedings honoring j p vigier this is perhaps the most exciting one as several important breakthroughs are introduced for the first time the most interesting breakthrough in view of the recent nist experimental violations of qed is a continuation of the pioneering work by vigier on tight bound states in hydrogen the new experimental protocol described not only promises empirical proof of large scale extra dimensions in conjunction with avenues for testing string theory but also implies the birth of the field of unified field mechanics ushering in a new age of discovery work on quantum computing redefines the qubit in a manner that the uncertainty principle may be routinely violated other breakthroughs occur in the utility of quaternion algebra in extending our understanding of the nature of the fermionic singularity or point particle there are several other discoveries of equal magnitude making this volume a must have acquisition for the library of any serious forward looking researchers
