light and matter electromagnetism optics spectroscopy and lasers provides comprehensive coverage of the interaction of light and matter and resulting outcomes covering theory practical consequences and applications this modern text serves to bridge the gap between electromagnetism optics spectroscopy and lasers the book introduces the reader to the nature of light explains key procedures which occur as light travels through matter and delves into the effects and applications exploring spectroscopy lasers nonlinear optics fiber optics quantum optics and light scattering extensive examples ensure clarity of meaning while the dynamic structure allows sections to be studied independently of one another covers both fundamentals and applications features numerous examples dynamic structure allows sections to be studied independently of one another in depth coverage of modern topics this is an essential text for students of electromagnetism and optics optoelectronics and lasers quantum electronics spectroscopy as well as being an invaluable reference for researchers

magnetic materials are all around us and understanding their properties underlies much of today's engineering efforts the range of applications in which they are centrally involved includes audio video and computer technology telecommunications automotive sensors electric motors at all

scales medical imaging energy supply and transportation as well as the design of stealthy airplanes this book deals with the basic phenomena that govern the magnetic properties of matter with magnetic materials and with the applications of magnetism in science technology and medicine although an in depth understanding of magnetism requires a quantum mechanical approach a phenomenological description of the mechanisms involved has been deliberately chosen in most chapters in order for the book to be useful to a wide readership the emphasis is placed in the part devoted to the atomic aspects of magnetism on explaining rather than attempting to calculate the mechanisms underlying the exchange interaction and magnetocrystalline anisotropy which lead to magnetic order hence to useful materials this theoretical part is placed in volume i between a phenomenological part introducing magnetic effects at the atomic mesoscopic and macroscopic levels and a presentation of magneto caloric magneto elastic magneto optical and magneto transport coupling effects
