the standing committee on defense materials manufacturing and infrastructure dmmi conducted a workshop on July 23-24, 2012 to share information and gather perspectives on issues concerning materials and manufacturing capabilities for sustaining defense systems. This workshop, held at the headquarters building of the National Academies, 2101 Constitution Avenue, N.W., Washington, D.C., was conducted according to the procedures of the National Research Council (NRC) for a convening activity. All workshop participants, including presenters, members of the dmmi standing committee, Reliance 21 invited guests, and visitors spoke as individuals and no overall findings, conclusions, or recommendations were developed during or as a result of the workshop. All statements and views summarized in this publication are attributable only to those individuals who expressed them. It is worth noting that the sponsor, Reliance 21, is a Department of Defense group of professionals that was established to enable the DoD science and technology (S&T) community to work together to enhance defense S&T programs, eliminate unwarranted duplication, and strengthen cooperation among the military services and other DoD agencies. The dmmi standing committee named a workshop planning group to develop the workshop agenda and decide on invited guests and presenters in accordance with the statement of task approved by the governing board of the NRC. The planning group also consulted with the Reliance 21 materials and processing community of interest. The presentations and discussions during the workshop are summarized sequentially in the main part of this report as an aid to readers. Nine themes have been identified by the author that recurred in multiple presentations and discussions. Materials and Manufacturing Capabilities for Sustaining Defense Systems: Summary of a Workshop explains these nine themes and summarizes the two-day workshop.

Emerging economies, social and political transitions, and new ways of doing business are changing the world dramatically. To be the leader in this competitive climate, a defense manufacturing enterprise will require up-to-date capabilities, which include improvements in materials processing, among other things. Also, national and international efforts to mitigate environmentally harmful effects of industrial processes and to improve decision-making for handling and disposing of industrial contaminants add additional requirements for any future efforts. The objective of retaining high-value materials-related manufacturing as a key national competitive capability implies a number of factors: the value of specific manufacturing capabilities could be defined not only in terms of criticality to defense systems but also in relation to technology and knowledge content, importance as a supplier to other industries, and importance to U.S. exports. Requested by the Department of Defense, DoD communities, the National Academies of Sciences, Engineering, and Medicine held a workshop in March 2015 to further explore materials and manufacturing processes. The participants explored changes in the global R&D landscape, technology awareness mechanisms—both DoD's mechanisms and other models—and collaboration models and issues in R&D. This publication summarizes the presentations and discussions from the workshop.
