any data analytics solution requires data population and preparation with the rise of data analytics solutions these years the need for this data preparation becomes even more essential power bi is a helpful data analytics tool that is used worldwide by many users as a power bi or microsoft bi developer it is essential to learn how to prepare the data in the right shape and format needed you need to learn how to clean the data and build it in a structure that can be modeled easily and used high performant for visualization data preparation and transformation is the backend work if you consider building a bi system as going to a restaurant and ordering food the visualization is the food you see on the table nicely presented the quality the taste and everything else come from the hard work in the kitchen the part that you don t see or the backend in the world of power bi is power query you may already be familiar with other data preparation and transformation technologies such as t sql ssis azure data factory informatica etc power query is a data transformation engine capable of preparing the data in the format you need the good news is that to learn power query you don t need to know programming power query is for citizen data engineers however this doesn t mean that power query is not capable of performing advanced transformation power query exists in many microsoft tools and services such as power bi excel dataflows power automate azure data factory etc through the years this engine became more powerful these days we can say this is essential learning for anyone who wants to do data analysis with microsoft technology to learn power query and master it we have been working with power query since the very early release of that in 2013 named data explorer and wrote blog articles and published videos about it the number of articles we published under this subject easily exceeds hundreds through those articles some of the fundamentals and key learnings of power query are explained we thought it is good to compile some of them in a book series a good analytics solution combines a good data model good data preparation and good analytics and calculations reza has written another book about the basics of modeling in power bi and a book on power bi dax simplified this book is covering the data preparation and transformations aspects of it this book series is for you if you are building a power bi solution even if you are just visualizing the data preparation and transformations are an essential part of analytics you do need to have the cleaned and prepared data ready before visualizing it this book is compiled into a series of two books which will be followed by a third book later getting started with power query in power bi and excel already available to be purchased separately mastering power query in power bi and excel this book power query dataflows will be published later this book deeps dive into real world challenges of data transformation it starts with combining data sources and continues with aggregations and fuzzy operations the book covers advanced usage of power query in scenarios such as error handling and exception reports custom functions and parameters advanced analytics and some helpful table and list functions

the book continues with some performance tuning tips and it also explains the power query formula language m and the structure of it and how to use it in practical solutions although this book is written for power bi and all the examples are presented using the power bi however the examples can be easily applied to excel dataflows and other tools and services using power query
